

# SMART BIG

The performing laboratory scanner, which adapts to all technical and economic needs.  
The consolidated solution for the digitalization of your dental center, with a lower investment.

Robust and durable hardware you can rely on  
A complete software, for all users  
One solution for all budgets

#### Easy to use system

Like all Open Tech 3D solutions, Smart Big is an open system which allows to import data from other systems and to export to the various CAD systems on the market. It also guarantees complete flexibility in the choice of the most suitable working strategies.

#### Wizard Mode & Free/Expert Mode

Smart Big scanning software has been developed based on the experience gained in more than 10 years in the dental sector. It is a consolidated, intuitive and easy-to-use scanning software. A particularly efficient and flexible wizard allows the inexperienced user to be productive from the very beginning. The free and expert modes, on the other hand, allow the qualified users maximum freedom of management and use of their own experience as an added value to the project.

#### Advanced Automatic Alignment System

Smart Big scanning software includes powerful automatic alignment algorithms that speed up the workflow and eliminate the possibility of user error, in particular for implant cases.
